Product owners, software developers, and Scurm Master are set and ideally don't change over time; the critical part is the Release Manager role you need to define here								

Goals	Aquire new skills
	Produce a functioning and valuable product
Meeting norms	We show up to the team meeting on time
	We respect each others opinions
Working norms	Produce clean code
	We respect other people's work
Coordination norms	Task responsibilities are well defined
	We balance workload among the team
Communication norms	We check our communication platform at least once every workday
	We communicate constructively
Consideration norms	We discuss issues openly
	We vote in case we can't reach a consensus
Cont. improvement norms	We consider the happines index to monitor team motivation
	We encourage critique and improvement efforts
Rewards	We praise each others work
	We treat ourselfes to a sweet of choice for good work
Sanctions	10 push-ups infront of the camera
	We critize objectively
Signatures	
Scrum Master	Paul Roy
Product owner	Johannes Kunow
Product owner	Fridtjof Damm
Software developer	Luka Dekanozishvili
Software developer	Jannik Novak
Software developer	Patrick Meusling
Software developer	Clemens Prosser

Product Vision	Project Mission
The firmware security analyzer EMBA, along with it's management and orchstration platform EMBArk, enables security professionals and firmware analysts to automate the scalable execution of firmware security scans. This is achieved by parallelizing firmware analyses, reducing manual effort and boosting throughput. As embedded systems become increasingly ubiquitous and complex, EMBArk constitutes a key part in the critical infrastructure in responsible and scalable firmware deployment and development—positioning itself as an essential tool for secure digital transformation. These core values are supplied to users of arbitrary firmware, penetration testing departments, and device vendors, with the common goal of ensuring high security standards.	The mission of this project is to develop a functional orchestration component for EMBArk that enables scalable and automated execution of firmware analysis tasks using the existing EMBA tooling. The MVP will support managing distributed workers (Kali/Ubuntu) via SSH, provide an API interface for job creation, and enable testers to manage worker nodes through a web-based dashboard. Key deliverables include job scheduling, worker management, result collection, and system monitoring features.

Term	Definition
worker node	a vm or physical machine carrying out firmware analyses
orchestrator	component which schedules firmware analysis jobs to worker nodes

Sprint #	Sprint goal
1	None
2	None
3	Implement basic API features
4	Establishing code quality best practices
5	Set cornerstones for orchestration from UI, worker configuration, and scheduling perspectives
6	Completing UI functionality and enable communication between EMBArk and worker nodes
7	Adding core orchestrator functionality and prepare UI for future features
8	Enable dispatching of firmware analyses with the orchestrator

Features						
1						
2						
3	**Implement basic API features**					
		API | Documentation tooling	1		1	
		Mount file system via SSHfs in Python	2		2	
		API | Generate API-Key in user interface	3		3	
		API | Upload firmware and add to queue	3		3	
4	**Establishing code quality best practices**					
		Integration testing	2		2	
		API | Documentation Upload firmware	1		1	
		API | Get status report	3		5	
		API | Documentation Status report	1		1	
		API | Integration test Upload firmware	2		2	
		Configure worker nodes in EMBArk	3		3	
5	**Set cornerstones for orchestration from UI, worker configuration, and scheduling perspectives**					
		API | Document API-Key generation	1		1	
		API | Integration test API-Key generation	2		2	
		EMBA offline worker configuration	3		5	
		Configuration scripts for worker node | Kali	3		5	
		Configuration scripts for worker node | Ubuntu	3		5	
		Reduce check_project.sh execution time	1		2	
		API | Integration test Status report	2		2	

6	**Completing UI functionality and enable communication between EMBArk and worker nodes**		
	EMBArk worker UI	3	3
	Orchestrator | Receive new workers	3	3
	Caching in GitHub actions pipeline	2	not completed
	Configure worker node	5	3
	Query worker node information	2	not completed
	Prepare upstream pull request	2	2
	Connect to worker node	2	3

12			13	24		
13			11	11		
Features						
7						
		Update worker nodes	3		not completed	
		Orchestrator | FIFO scheduling	2		2	
		EMBArk worker UI | Show job id in worker nodes table	2		1	
		Orchestrator | Query worker pool	2		2	
		Query worker node information	2		not completed	
		UI | Update/Reset	1		not completed	
		Caching in Github actions pipeline	2		2	
8						
		Add Celery dependency	2			
		EMBArk starts firmware analysis on worker node	2			
		Monitor workers and collect results	3			
		Soft reset worker node	2			
		Hard reset worker node	2			
		Periodic worker information fetch	3			
9						
		Update routinen	8			
		Orchestrator | Abort running firmware analyses	3			
		Trigger orchestrator	3			
		Pull request	1			
10						
		EMBArk without Orchestrator	5			
		Pull Request	2			
		Complete port scan for worker nodes	2			
		Priority queue	5			
11						

	API Endpoint to query vendor information	5
	Initialize user, design and build/deploy documentation	3
	Automate worker configuration steps	2
	Pull request: Change requests	3
12		
	Finalize Documentation	3
	Final upstream feature PR	5
	Final upstream feature PR: Change requests	5

#	Feature Definition of Done	Sprint Release Definition of Done	Project Release Definition of Done
1	Github actions pipeline runs without errors	Features and changes have been demoed in review	Build and deployment documentation exists
2	If changes are visible to users, documentation is added	Features not covered by unit tests are not negatively impacted by sprints changes	Software architecture documentation is up to date
3	Code review passed		Readme is up to date
4	Code merged to main branch		
5	Testable code has appropriate unit tests (Unfortunately the nature of the product forbids general statements for code coverage)		
6	SBOM updated: Added new dependencies to SBOM, removed removed dependencies		
7	Changes added to change log		
8	All added dependencies follow an open source license compatible with the project		
	* Upstream PR is explicitly not part of the DoD because the client prefers frequent pulls as soon as features are ready

How to play planning poker

1. Everyone type their number into their value field, don't hit return yet
2. Someone, perhaps a product owner, count down 3.. 2.. 1..
3. Then, everyone hit return to submit their value
