Product owners, software developers, and Scrum Master are set and ideally don't change over time; the critical part is the Release Manager role you need to define here								

Goals	Acquire new skills
	Produce a functioning and valuable product
Meeting norms	We show up to the team meeting on time
	We respect each others opinions
Working norms	Produce clean code
	We respect other people's work
Coordination norms	Task responsibilities are well defined
	We balance workload among the team
Communication norms	We check our communication platform at least once every workday
	We communicate constructively
Consideration norms	We discuss issues openly
	We vote in case we can't reach a consensus
Cont. improvement norms	We consider the happiness index to monitor team motivation
	We encourage critique and improvement efforts
Rewards	We praise each others work
	We treat ourselves to a sweet of choice for good work
Sanctions	10 push-ups in front of the camera
	We criticize objectively
Signatures	
Scrum Master	Paul Roy
Product owner	Johannes Kunow
Product owner	Fridtjof Damm
Software developer	Luka Dekanozishvili
Software developer	Jannik Novak
Software developer	Patrick Meusling
Software developer	Clemens Prosser

Product Vision	Project Mission
<p>The firmware security analyzer EMBA, along with it's management and orchstration platform EMBark, enables security professionals and firmware analysts to automate the scalable execution of firmware security scans. This is achieved by parallelizing firmware analyses, reducing manual effort and boosting throughput. As embedded systems become increasingly ubiquitous and complex, EMBark constitutes a key part in the critical infrastructure in responsible and scalable firmware deployment and development—positioning itself as an essential tool for secure digital transformation. These core values are supplied to users of arbitrary firmware, penetration testing departments, and device vendors, with the common goal of ensuring high security standards.</p>	<p>The mission of this project is to develop a functional orchestration component for EMBark that enables scalable and automated execution of firmware analysis tasks using the existing EMBA tooling. The MVP will support managing distributed workers (Kali/Ubuntu) via SSH, provide an API interface for job creation, and enable testers to manage worker nodes through a web-based dashboard. Key deliverables include job scheduling, worker management, result collection, and system monitoring features.</p>

Term	Definition
worker node	a vm or physical machine carrying out firmware analyses
orchestrator	component which schedules firmware analysis jobs to worker nodes
celery task queue	a python task queue to allow for concurrent processing
worker node configuring	the action of installing EMBA and all its dependencies on a worker node so that it can be used to analyse firmware

Sprint #	Sprint goal
1	None
2	None
3	Implement basic API features
4	Establishing code quality best practices
5	Set cornerstones for orchestration from UI, worker configuration, and scheduling perspectives
6	Completing UI functionality and enable communication between EMBark and worker nodes
7	Adding core orchestrator functionality and prepare UI for future features
8	Enable dispatching of firmware analyses with the orchestrator
9	Tie loose orchestrator ends together
10	Enhance worker management to refine user experience
11	Invest in stability
12	Finally finish main orchestrator functionality
13	
14

Features						
1						
2						
3	Implement basic API features					
	API Documentation tooling		1		1	
	Mount file system via SSHfs in Python		2		2	
	API Generate API-Key in user interface		3		3	
	API Upload firmware and add to queue		3		3	
4	Establishing code quality best practices					
	Integration testing		2		2	
	API Documentation Upload firmware		1		1	
	API Get status report		3		5	
	API Documentation Status report		1		1	
	API Integration test Upload firmware		2		2	
	Configure worker nodes in EMBark		3		3	
5	Set cornerstones for orchestration from UI, worker configuration, and scheduling perspectives					
	API Document API-Key generation		1		1	
	API Integration test API-Key generation		2		2	
	EMBA offline worker configuration		3		5	
	Configuration scripts for worker node Kali		3		5	
	Configuration scripts for worker node Ubuntu		3		5	
	Reduce check_project.sh execution time		1		2	
	API Integration test Status report		2		2	

6	Completing UI functionality and enable communication between EMBArk and worker nodes		
	EMBArk worker UI	3	3
	Orchestrator Receive new workers	3	3
	Caching in GitHub actions pipeline	2	not completed
	Configure worker node	5	3
	Query worker node information	2	not completed
	Prepare upstream pull request	2	2
	Connect to worker node	2	3

13			14	14		
Features						
7						
		Orchestrator FIFO scheduling	2		2	
		EMBark worker UI Show job id in worker nodes table	2		1	
		Orchestrator Query worker pool	2		2	
		Caching in Github actions pipeline	2		2	
8						
		Add Celery dependency	2		2	
		Soft reset worker node	2		2	
		Periodic worker information fetch	3		2	
		Update worker nodes	3		5	
		Query worker node information	2		2	
		UI Update/Reset	1		1	
9						
		Pass newly configured worker nodes to orchestrator	1		2	
		EMBark starts firmware analysis on worker node	2		3	
		Hard reset worker node	1		1	
		Fix Github Actions bugs	2		2	
		Use Celery for worker node updates	1		1	
10						
		Add Settings App to EMBark	2		2	
		Manually check for updates	3		3	
		EMBark default installation produces FileNotFoundError on startup	2		1	
		Collect dependency version information when configuring or updating node	2		1	
		Celery for reset	1		1	
		Add users to sudoers when configuring workers	1		1	
		Reset all worker nodes in config	1		1	

11		
	Hide worker app in sidebar when disabled	1
	Orchestrator Free worker nodes	2
	Safe and prioritized worker update management	1
	PR Revised Github Actions pipeline and check_project.sh	1
	Download specific worker nodes dependency version	2
12		
	Trigger Orchestrator	2
	Orchestrator Abort running firmware analysis	2
	Monitor workers and collect results	2
	Orchestrator Upstream pull request	2
	Validate analysis workflow with orchestrators	1
	Add wiki entries for API	1
	Celery for IP range scanning	2
	Extend update user experience	1
	Handle unresponsive worker nodes	2
	Pull request: Change requests	2
13		
	Provide adequate feedback for apt dependency updates of worker nodes	3
	Wiki documentation	2
	Final upstream feature PR: Change requests	2
	Automate worker configuration steps	1
	Check EMBark permissions	2
	Periodic check for updates	1
	Indicate currently installed dependency versions for EMBA and externals	2
	Don't allow overlapping IP ranges in configurations	1

#	Feature Definition of Done	Sprint Release Definition of Done	Project Release Definition of Done
1	Github actions pipeline runs without errors	Features and changes have been demoed in review	Build and deployment documentation exists
2	If changes are visible to users, documentation is added	Features not covered by unit tests are not negatively impacted by sprints changes	Software architecture documentation is up to date
3	Code review passed		Readme is up to date
4	Code merged to main branch		
5	Testable code has appropriate unit tests (Unfortunately the nature of the product forbids general statements for code coverage)		
6	SBOM updated: Added new dependencies to SBOM, removed removed dependencies		
7	Changes added to change log		
8	All added dependencies follow an open source license compatible with the project		
	* Upstream PR is explicitly not part of the DoD because the client prefers frequent pulls as soon as features are ready

How to play planning poker

- 1. Everyone type their number into their value field, don't hit return yet
- 2. Someone, perhaps a product owner, count down 3.. 2.. 1..
- 3. Then, everyone hit return to submit their value
