AMOS - Planning Document Team Contract

Goals	Aquire new skills			
	Produce a functioning and valuable product			
Meeting norms	We show up to the team meeting on time			
	We respect each others opinions			
Working norms	Produce clean code			
	We respect other people's work			
Coordination norms	Task responsibilities are well defined			
	We balance workload among the team			
Communication norms	We check our communication platform at least once every workday			
	We communicate constructively			
Consideration norms	We discuss issues openly			
	We vote in case we can't reach a consensus			
Cont. improvement norms	We consider the happines index to monitor team motivation			
	We encourage critique and improvement efforts			
Rewards	We praise each others work			
	We treat ourselfes to a sweet of choice for good work			
Sanctions	10 push-ups infront of the camera			
	We critize objectively			
Signatures				
Scrum Master	Paul Pau			
Product owner	Paul Roy			
	Johannes Kunow			
Product owner	Fridtjof Damm			
Software developer	Luka Dekanozishvili			
Software developer	Jannik Novak			
Software developer	Patrick Meusling			
Software developer	Clemens Prosser			

AMOS - Planning Document Product Goal

## Product Vision Project Mission

The firmware security analyzer EMBA, along with it's management and orchstration platform EMBArk, enables security professionals and firmware analysts to automate the scalable execution of firmware security scans. This is achieved by parallelizing firmware analyses, reducing manual effort and boosting throughput. As embedded systems become increasingly ubiquitous and complex, EMBArk constitutes a key part in the critical infrastructure in responsible and scalable firmware deployment and development—positioning itself as an essential tool for secure digital transformation. These core values are supplied to users of arbitrary firmware, penetration testing departments, and device vendors, with the common goal of ensuring high security standards.

The mission of this project is to develop a functional orchestration component for EMBArk that enables scalable and automated execution of firmware analysis tasks using the existing EMBA tooling. The MVP will support managing distributed workers (Kali/Ubuntu) via SSH, provide an API interface for job creation, and enable testers to manage worker nodes through a webbased dashboard. Key deliverables include job scheduling, worker management, result collection, and system monitoring features.

AMOS - Planning Document Product Glossary

Term	Definition
worker node	a vm or physical machine carrying out firmware analyses
orchestrator	component which schedules firmware analysis jobs to worker nodes

AMOS - Planning Document Sprint Goals

AMOS - Planning Document Definition of Done

#	Feature Definition of Done	Sprint Release Definition of Done	Project Release Definition of Done
1	Github actions pipeline runs without errors	Features and changes have been demoed in review	Build and deployment documentation exists
2	If changes are visible to users, documentation is added	Features not covered by unit tests are not negatively impacted by sprints changes	Software architecture documentation is up to date
3	Code review passed		Readme is up to date
4	Code merged to main branch		
5	Testable code has appropriate unit tests (Unfortunately the nature of the product forbids general statements for code coverage)		
6	SBOM aktualisiert: Neue Dependencies in SBOM hinzugefügt, entfernte Dependencies ausgetragen		
7	Changes added to change log		
8	All added dependencies follow an open source license compatible with the project		
	* Upstream PR is explicitly not part of the DoD because the client prefers frequent pulls as soon as features are ready

## How to play planning poker

- 1. Everyone type their number into their value field, don't hit return yet
- 2. Someone, perhaps a product owner, count down 3.. 2.. 1..
- 3. Then, everyone hit return to submit their value
